

EETT: Accession in the EPAnEK of the project for an innovative Spectrum Monitoring System deployment

EETT's project "Deployment of an innovative Spectrum Monitoring System in order to reinforce entrepreneurship through electronic communications sector" has been included in the Operational

Programme "Competitiveness, Entrepreneurship and Innovation (EPAnEK) 2014-2020", according to the Decision of the Special Secretary for Management of ERDF (European Regional Development Fund) and CF (Cohesion Fund) Sectoral Operational Programmes, of the Ministry of Finance and Development.

The objective of the project is the deployment and operation of a technologically innovative, modern and geographically extended Spectrum Monitoring System. EETT, with the new system, aims to ensure the prompt and transparent handling of providers' increasing requests for the deployment of broadband networks, as well as to resolve frequency interference problems. Moreover, in the context of the new regulatory framework regarding digital television and radio broadcasting, EETT will meet the expected requirements concerning spectrum supervision. As a result, EETT will contribute to the promotion of digital economy and entrepreneurship, in addition to the effective management of the radio frequency spectrum, to the benefit of all users.

The open tender procedure is expected to be launched in 2019 and the project will be completed in 2023. The allocated budget for the project amounts to 30.000.000 euro in total. The project is cofunded by the ERDF.
