

Complaint handling

If you wish to submit a complaint to EETT about an interference in the operation of a radio communication station (e.g. a mobile telephony station, special radio network, radio station), fill out the [complaint form for interferences](#).

Your complaint must include the exact location, time and duration of interference, in addition to any additional technical data or measurements which can facilitate the examination of your complaint.

EETT carries out on-site inspections with special measuring equipment to locate the origin of interferences. Afterwards, it takes appropriate measures to resolve the problem and duly informs the complainant.
